a) transfecting or transforming a suitable host cell, tissue or organism with a DNA sequence as claimed in claim 43 to obtain transgenic host cells, tissues or organisms;

b) expressing the said DNA sequence in the presence of farnesyl pyrophosphate (FPP); and

c) isolating the amorpha-4,11-diene thus formed,

wherein the transgenic host cells, tissues or organisms harbor the genetic information coding for the enzymes that further convert amorpha-4,11-diene to artemisinin and wherein the expression level of the amorpha-4,11-diene synthase is higher in transgenic host cells, tissues or organisms harboring an endogenous version of the DNA sequence than in non-transgenic host cells, tissues or organisms.

72. (Withdrawn): A source of artemisinin, comprising host cells, tissues or organisms harboring a DNA sequence as claimed in claim 43 and the genetic information coding for the enzymes that further convert amorpha-4,11-diene to artemisinin, which host cells, tissues or organisms have expressed the said DNA sequence.

73. (Withdrawn): The source as claimed in claim 72, wherein the cells are cells selected from the group consisting of bacterial cells, yeast cells or plant cells.

present invention, namely, DNA sequences which exhibit at least 70% homology to SEQ ID NO: 13.

Claims 75-84 stand rejected under 35 U.S.C. § 112, first paragraph, for lack of written description. In the Office Action, it is asserted that the language "non-human" is not supported in the original disclosure and is requiring that this language be deleted from the claims. Claim 75 has been amended to delete the recitation "non-human."

In view of the foregoing amendments and remarks, it is respectfully submitted that all of the pending claims in the present application comply with the requirements of §§ 101 and 112. Accordingly, reconsideration and withdrawal of the rejection and an early Notice of Allowance are respectfully requested.

Respectfully submitted,
